ICON TECHNOLOGIES LIMITED 2024

While what we “do” is design and manufacture premium parts and service solutions for RVs, it’s “how” we do it that really matters.

We see our work as solving problems. We’re real people, driving real solutions, for real needs. Everything we do is in service to our customers. Why? Because they deserve a far better experience.

The products we make, and how we deliver them, is worth talking about. If we can help make a better-than-expected journey on (and off) the road, we’ve done our job. We do what we do because we believe that:

**Your Journey Is the Experience.**

# The story

Icon Technologies Limited is a supplier of rotational molding and thermoformed plastic products serving the RV industry. The company just completed the construction of a new production facility due to the increased demand of their products. ICON now has the capacity to make new products and supply more original equipment manufacturers (OEM), dealers, and consumers.

## Success by Design

John Loewen founded ICON in 1997, with a few ideas and the knowledge to design and manufacture. Loewen grew up in Winkler, a community of fewer than 15,000 people, and gained a great deal of knowledge from his father, an exceptional craftsman and pattern maker. “I basically grew up designing and building products, which has been an asset to growing the company to where it is today,” says Loewen. Armed with the ability and knowledge to create new products, Loewen was driven to start ICON in what he calls a “1,600 square foot glorified two-car garage.” The space was quickly outgrown and has been steadily growing ever since, adding production space throughout the years. After identifying the need for more space once again in 2016, the company began designing and building the new 105,000 square foot state of the art manufacturing plant and warehouse. ICON currently resides on 17 acres of land in Winkler’s Cloverdale Industrial Park, with a 2021 expansion already in the works.

Until 2008, ICON had only a small offering of aftermarket products. Then came the news of the closing and bankruptcy of Fleetwood RV – which got Loewen thinking of a new opportunity. Loewen knew the closing of the

world’s largest RV manufacturer at the time would create a void that would need to be filled. Fleetwood owners were trying to maintain their units, but were no longer able to find the replacement parts they needed. ICON began identifying model years that were no longer being supported and developed replacement parts for those ‘orphaned RVs’. “Today, ICON has a full range of parts that are not being supported by the original manufacturers for various reasons. Our specialty is producing parts that are not readily available under other means, not only for those ‘orphaned RVs’ but also for existing manufacturers in their aftermarket. That has worked really well for us,” says Loewen.

## Success by Product

What has made much of this possible for ICON is the relationship with the end consumer through the company website. The product requests from RV owners are what keep new products in the pipeline. Loewen says, “Back in 2008, we had a small selection of fender skirts available on our website. If we didn’t have the exact model consumers were looking for, we offered to recreate it for them by having them send us their broken pieces. This is how we were able to restore products for the ‘orphaned RVs’ and

build up our product library.” Today, ICON has over 800 fender skirt parts available. Other products the company manufactures include skylights, air-conditioning shrouds, wind deflectors (an item also popular with the truck market), and other specialty items. ICON is also able to provide fresh water tanks to the company's 2016 expansion into rotational molding.

ICON has developed a strong network of international distributors and dealers to deliver its products, primarily in the US, Canada, Mexico and Japan. However, this is not the only way consumers can purchase from ICON. RV owners can also buy directly through [www.icondirect.com](http://www.icondirect.com) and have the product shipped straight to their door. ICON strives to make business as easy as possible for dealers and distributors by supplying point-of-purchase (POPs) materials, including a three-sided display that helps RV owners find ICON's products. “When the consumer walks into a dealership, they may not necessarily be thinking about the crack in their fender skirt or their broken air-conditioning shroud, but the display brings it back to mind,” Loewen says. “ICON brings value to the dealership by offering POPs, fender skirt signs, and online search databases. These are resources that competitors may not be offering the dealers.”

The products at ICON are of various shapes and sizes, which requires many different types of packaging. The company owns a CNC-operated box maker and large format color printer, which allows it to design a box specific to the product on demand. ICON also creates and prints its own graphics which allows it to brand specifically for each product. With the company's existing warehouse space, it is able to keep stock of all of 1,600 different products so it can ship directly from inventory rather than made to order as has been done in the past. As a supplier to North America, Winkler is a good spot to be. ICON is minutes from the United States border and about equal distance to all the outside parameters of North America. This allows orders to our customers in the US to be trucked directly through customs and then shipped to their destinations.

**ICON is also able to provide fresh water tanks and waste holding tanks, thanks to the rotational molding division.**

### Growing Bigger – and Better

Loewen believes the reason people choose ICON over its competitors is the quality the brand represents and the accessibility through its webstore. “Our parts are typically of higher quality than what the unit originally came with. For instance, our skylights are more than twice as thick as the original. In terms of our website, it is easy to navigate, find the replacement part, and make the selection,” Loewen says. “With [www.lookup-our-skirts.com](http://www.lookup-our-skirts.com), any type of consumer can go to the website and choose the fender skirt they need without having a VIN or part number. All they need to know is the size of the product and the brand of the unit on which it is fitting. This is a feature nobody else in the industry offers.” The combination of these qualities makes it easy for consumers to select ICON over other aftermarket brands.

One thing that Loewen speaks proudly of is the company culture at ICON. “I believe this is what makes the company exceptional. We take care of our employees by providing them with an enjoyable environment – a clean and modern facility, comfortable break room that serves

homemade lunches, and organized workspaces – where they can excel in their work. All of these things together help employees to build relationships with one another and creates a positive work environment. ICON also has a flat organizational structure, which allows people to work freely and to have autonomy and pride over their own work.

We believe that if our employees feel they are being treated well, they will in turn treat our customers well.” Loewen also stated, “In order to provide great quality products you also have to have great quality equipment and technology. Having equipment that is reliable, easy to use and set up, and allows fast mold changes helps to accommodate our wide range of products. Although the parts are technically challenging to produce, the introduction of computer-operated equipment has helped to produce consistency from part to part and ensure consumers are receiving the quality products they expect. Both the hard-working staff and the dependent technology has been the key to building a strong brand in the market.”

Loewen finishes with,

**“We are extremely pleased with the rapid growth and success of the company in the last few years, and we are very excited to see what the future holds for ICON. We believe ICON is well-positioned moving forward to supply products to the aftermarket and OEM customers to meet the growing demands of the RV industry.”**

### IMPORTANT! READ BEFORE INSTALLING

1. Our wind deflectors are designed to mount onto the majority of vehicles on the market today. The gutter hooks provided fit most external or internal rain gutters. There are also some vehicles where this design is not applicable. It is the customer's responsibility to choose and install the correct hook for their respective vehicle and to check for proper fit.

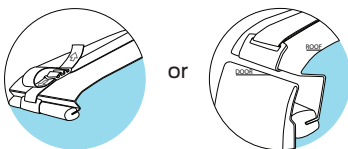

2. Road safety considerations require that all bolts and straps should be inspected regularly for tightness when installing the wind deflector for a long period of time. Travelling at high speeds, high winds, or driving on gravel causes vibrations, which could loosen bolts and straps. We recommend inspecting your AeroShield every 500 km when driving on pavement and every 200 km when driving on gravel.

3. The utility strap can be cut to an exact length where required. The cut edge should then be sealed by heating lightly with an open flame until the material starts to melt.

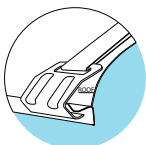

### Preparation for Installation

1. Choose the appropriate suction cup mounting position for your vehicle, taking into account any ribs on your roof.
2. Move suction cups to desired position by removing bolts and re-attaching.
3. Ensure that all bolts on entire wind deflector are fully secure before mounting on vehicle.

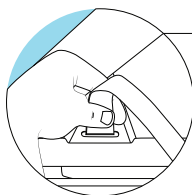

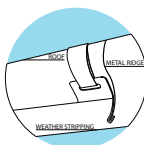

#### Internal Rain Gutter

#### External Rain Gutter

#### #9 Hook, Concealed under weather stripping

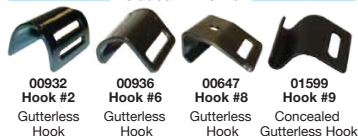

1 Feed the nylon strap through the slot on the side of the wind deflector.

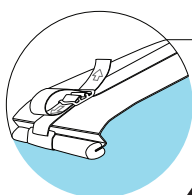

For the latest hook application guide, scan or go to [icondirect.com/hooks](http://icondirect.com/hooks)

Choose appropriate hook for your vehicle according to the Wind Deflector Hook Application Guide.

#### Included in the Box

#### Special Order

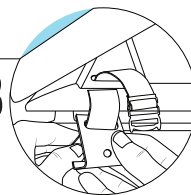

4

Feed the end of the strap through the middle of the buckle from the bottom, then through the front of the buckle from the top. After that feed the end of the strap through the back of the buckle from the top.  
(The strap should now make a loop.)

Slide the correct hook onto the nylon strap.

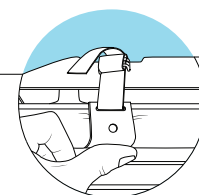

3

Repeat the above steps for each of the four straps.

5

With vehicle doors open, position the hooks so that they firmly engage the external or internal rain gutters. (Some vehicles do not have rain gutters. The hooks should attach to the cab between the door and the roof.) All four hooks must be used. DO NOT attach hooks to the door or window.

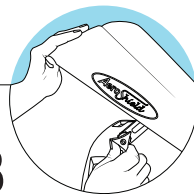

6

Adjust tension on the four straps evenly so that the wind deflector is centered on the roof and hooks are securely attached to the vehicle. BE SURE TO FULLY TIGHTEN THE STRAPS. There should be no slack on the straps if tightened properly.

7

Adjust the angle of the wind deflector so that it is aimed at the top of the trailer you are towing.

8

9

Tighten the 3-prong wing nut and bolt after adjusting the angle.

**Your wind deflector is now ready for use!**

**Worn out  
skylight domes  
can cause  
water damage.**

**Replace It!**

Made of an impact resistant LEXAN polycarbonate material, ICON replacement skylight domes come in a variety of sizes and shapes.

All models have a flat flange that allows for an easy & leak free seal to the roof of your RV.

### RV Tips

Use ICON Sealant when installing your new ICON Replacement Skylight Dome. It's specially formulated for use with both our polycarbonate material and your RV roof. It's safe for most common RV rooftops including EPDM Rubber.

**Not all A/C  
shrouds are  
created equal**

**Replace It!**

ICON's aftermarket replacement air-conditioner shrouds are molded of high impact UV resistant material, **thicker and stronger than the originals.**

Buy an ICON shroud and you'll have complete peace of mind, knowing that your shroud is designed to last.

## SPIN FITTING INSTRUCTIONS

### Fresh water tanks

**1** When attaching a Spin Weld Fitting, select an area as flat as possible, where the fitting and Driving Tool can turn freely.

**2** With the proper size Hole Saw, drill a hole in the container slightly larger than the pilot on the fitting. The fitting must be able to rotate freely.

**3** On small fittings (1/2" and smaller) you can use a 1 HP Electric Router. On fittings measuring 3/4" to 1-1/2", a 1 to 1-1/2 HP to 2 HP Electric Router is acceptable. On small fittings 1/2" and smaller, we supply drivers with 1/4" shanks. Our fittings 3/4" and larger, we supply drivers with 1/2" shanks. All electric routers should have 18,000 to 25,000 RPM's.

**4** Place fitting pilot in the hole of the container.

**5** Holding the Router in your hands and having the driving tool attached to the fitting, turn on the power and apply slight pressure so that molten plastic starts to flow around the outside diameter of the fitting. You will develop a technique as to how to apply pressure. The melting process will only take 2-3 seconds. Turn off the power and keep the driver in position with applied slight pressure for another 5 seconds. This will ensure a good bond with approximately 1/4" molten plastic surrounding the diameter of the fitting.

**6** After 1 minute you can apply testing procedures, such as tapping with a hammer or prying with leverage.

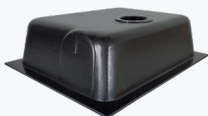

**7** Plug open fittings to keep the tank clean or install plumbing as necessary.

# Holding Tank Measuring Guide

## 1. Select your drain style

☐ Bottom Drain

☐ Center End Drain

☐ Center Side Drain

☐ Left End Drain

☐ Left Side Drain

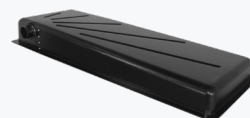

☐ Recessed Drain

☐ Right End Drain

☐ Right Side Drain

## 2. Measure your original tank and compare with the RV parts diagrams

Measure your holding tank in  
Inches and fill in the numbers  
on the lines below

L : \_\_\_\_\_

**Overall Length** - The overall length measurement including flange (if there is a flange)  
Measured on the longest side of your holding tank

W : \_\_\_\_\_

**Overall Width** - The overall width measurement including flange (if there is a flange)  
Measured on the shortest side of your holding tank

H : \_\_\_\_\_

**Overall Height** - The overall height measurement  
Measured from the top of the holding tank to the lowest point which is usually the bottom of the drain
